Special Feature:

The Hay Limo is built from 7" x 7" x 3/8" square main center tube which is 20% stronger than the competitor and it has a 3" x 5" x 1/4" main frame which makes a strong base. All wiring is enclosed to protect it from the weather and from being damaged. The Hay Limo has a special feature called a "Break Lock." With the flip of a switch on the trailer both axles lock to prevent motion of the vehicle and trailer while loading putting less stress on your vehicle. Loading of the Hay Limo usually takes less than 10 minutes to load and there is no time wasted having to tie bales down. Unloading is even faster, in about 30 seconds you can pull a lever and instantly unload and have your bales in a nice neat roll. And you didn't even have to have a tractor to help unload.

- All Warranty Work must be done by Welding Innovations.
- Additional standards, options and models may be available. See your authorized dealer for details. Information in this brochure is subject to change.
